

# FLORIDA AGRICULTURAL STATISTICS

## Citrus Summary 1989-90

FLORIDA DEPARTMENT OF AGRICULTURE  
AND CONSUMER SERVICES

BOB CRAWFORD, COMMISSIONER

FLORIDA AGRICULTURAL  
STATISTICS SERVICE

Robert L. Freie, State Statistician

DIVISION OF MARKETING

Dr. H. Vance Young, Jr., Director

### Cooperating with

U. S. Department of Agriculture  
Agricultural Marketing Service  
and  
National Agricultural Statistics Service

### ACKNOWLEDGMENT

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida as shown in this summary are official estimates of the Florida Agricultural Statistics Service. Corresponding data for other citrus states are from official reports of the USDA, National Agricultural Statistics Service. Canned and frozen pack statistics were compiled by the Florida Citrus Processors Association. Where data are from other sources, appropriate references appear.

Records of the Division of Fruit and Vegetable Inspection, Florida Department of Agriculture and Consumer Services, were used in preparing production and utilization estimates. The Citrus Administrative Committee assisted in assembling these data.

Many producers, shippers, processors, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contributions are sincerely appreciated.

This report was assembled under the direction of Robert R. Terry, Candice T. Erick and Stacy M. Phillips of the Florida Agricultural Statistics Service.

## FLORIDA WEATHER HIGHLIGHTS, SELECTED AREAS AND MONTHS, 1989-90 CROP YEAR

For the fifth season in the last ten, Florida's citrus was adversely affected by subfreezing weather. Three of the last five major freezes have occurred in mid-January, and two on Christmas day.

Springlike weather in early February 1989 caused new growth and bloom buds to form and on February 24 and 25 a cold snap killed many of these buds and new growth as far south as Immokalee where the temperature dipped to 25 degrees. Rainfall amounts were mostly adequate through the spring. New growth and bloom followed, but fruit set was not uniform, being light in many areas.

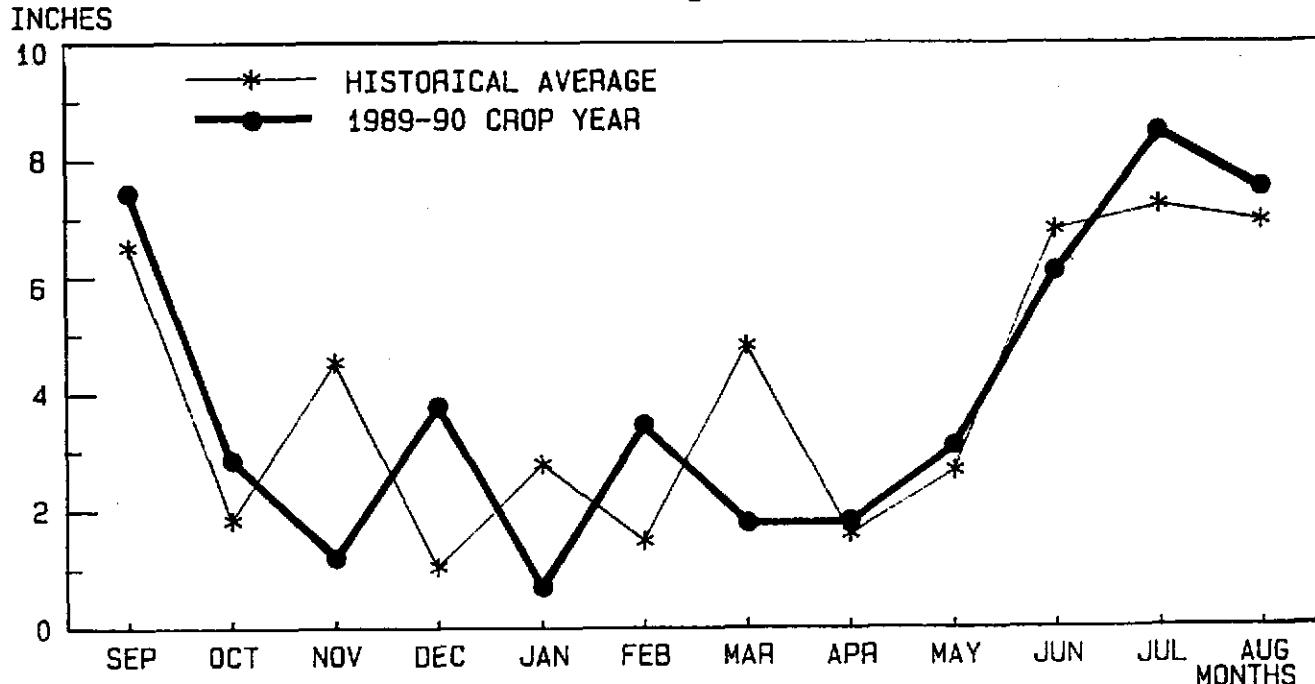

May and June temperatures were generally above average levels but rainfall was limited. By the first of July, deficits of 2 to 9 inches were common throughout the citrus belt.

Rainfall in August and September was mostly adequate, permitting trees and new fruit to progress normally. By October and November, however, dry and warm weather prevailed. Early December temperatures were cooler than normal which allowed trees to enter semi-dormancy. Rainfall amounts were higher than normal.

Rain preceding the cold front of December 24 turned to ice and light amounts of snow in some northern and central producing areas as temperatures dropped. High teen and low twenty degree temperatures were reported as far south as Immokalee and Stuart. Only the Palm Beach County citrus growing area escaped the freeze.

Weather following the freeze was unseasonably warm and dry for all of January and most of February. The freeze and subsequent warm weather caused trees to bloom earlier than normal in late January and early February.

FLORIDA PRECIPITATION: Average monthly rainfall, ten selected stations.  
1984-85 through 1988-90 and 1989-90

## 1989-90 PRODUCTION AND TREE CENSUS

### PRODUCTION

Florida's citrus production was adversely affected by the freezing weather of December 24 and 25, 1989. Orange production at 110.2 million boxes, was the lowest since the freeze affected 1984-85 season production of 103.9 million boxes. Production had returned to 146.6 million boxes in 1988-89.

Grapefruit production was also affected, falling to 35.7 million boxes from the previous season's near record 54.75 million boxes. Colored seedless varieties accounted for 46 percent of the total production.

Lime production, only slightly affected by the freeze, increased 24 percent. Production of all other specialty crops was reduced, principally because of the freeze.

The all orange FCOJ final yield was 1.22604 gallons per box, greatly reduced because of the freeze. Early and midseason oranges averaged 1.23446 gallons per box and Valencias 1.20566, the lowest since the 1976-77 season.

California's orange production was a record 73.1 million 75 lb. boxes. Navels were 44.1 million boxes and Valencias 29.0 million boxes. Grapefruit production was also up, from 8.0 to 8.7 million boxes.

Arizona's orange production was 1.57 million boxes, 380,000 boxes of Navels and 1.19 million boxes of Valencias. This was down from the previous season's production of 1.7 million boxes. Grapefruit production increased from 1.95 to 2.2 million boxes.

Texas' orange production (mostly Navels) was down from 1.85 million boxes in 1988-89 to 1.205 in 1989-90. Grapefruit production at 2.0 million boxes was drastically reduced by the December 1989 freeze. The previous season 4.8 million boxes were harvested.

### TREE CENSUS

The Florida Agricultural Statistics Service first began indexing the State's commercial citrus groves on aerial photography as of January 1966. Ground crews identify all the State's groves by fruit type, row spacing, and year in which set. Photo interpreters in the Orlando office then delineate the groves by variety blocks on photo transparencies at a scale of 1 inch to 660 feet. Variety blocks are measured with planimeters to obtain acreage and then indexed by land section.

The inventory is designed for quick and economical updating. Since 1966, the citrus belt has been resurveyed each second winter (1968 through 1990) to determine changes. Photographing begins in November when weather conditions are most favorable and is generally completed in 80 to 90 days. The same three-mile-wide flight lines established in 1966 are photographed on each succeeding flight. Approximately 14,000 square miles of photography is obtained at a 1 to 30,000 scale.

The last statewide survey was conducted as of January 1990. Through 1989, all types of citrus planted totaled 732,767 acres, up 5 percent from the 697,929 acres recorded in January 1988. Increases were highest in lower interior counties. Acreage by counties and types is shown on page 27.

Photography for the next survey will begin in November 1991 and field work will update the acreage records as of January 1992.

### FLORIDA, ALL CITRUS: Acres in commercial groves as of January 1966 - 1990, with percent changes

		: Percent change from

1990	732,767	+5.0	-14.6

## 1989-90 VALUE OF SALES, PRICES AND EXPORTS

### VALUE

The preliminary on-tree value of all citrus for the 1989-90 season is \$908.6 million. This is 36 percent less than the 1988-89 revised value of \$1.430 billion. The record high 1987-88 season value was \$1.443 billion.

Preliminary value is based on that part of the crop priced at harvest, about 30 percent of the total. When all participation plans and cooperative pools are finalized, a revised value is calculated. The slight upward revision in the 1988-89 season is due to participation prices that were higher than cash prices for oranges.

Preliminary orange prices are down from a revised \$7.41 in 1988-89 to \$5.77 in 1989-90. Fresh shipments were reduced because of the freeze but prices were much higher at \$10.31 per box compared to \$7.61 in 1988-89. Processing prices are down from \$7.40 to \$5.51.

Grapefruit prices are up from \$4.45 to \$5.79. Prices for fresh grapefruit returned \$10.00 per box and processing returned \$3.28. Prices for tangerines and lemons were up; but tangelo, K-Early Citrus Fruit, and limes brought less per box. Temple prices were unchanged.

The season average delivered-in price of fruit going into FCOJ as reported by the Florida Citrus Processors Association is \$7.30 per box or \$1.49 per pound of solids. Early-mids averaged \$6.60 per box or \$1.35 per pound and Valencias averaged \$8.60 per box or \$1.75 per pound solids.

### FLORIDA, ALL CITRUS: Value of sales on-tree, crop years 1980-81 through 1989-90

Crop : year	Value : 1,000 dol.	:: Crop : year	Value : 1,000 dol.
1980-81	953,350	:: 1985-86	725,035

1982-83	876,777	:: 1987-88	1,443,116
1983-84	849,457	:: 1988-89 <sup>1/</sup>	1,429,808
1984-85	984,820	:: 1989-90 <sup>2/</sup>	908,560

1/ Revised. 2/ Preliminary.

### FOREIGN EXPORTS

Fresh fruit exports totaled 12,302,000 4/5 bushel cartons, the lowest since the 1985-86 season. Beginning in the 1989-90 season, shipments to Canada and Mexico are included in export totals. Canada accounts for the most receipts of Florida oranges and tangerines and Japan is the largest receiver of grapefruit.

A total of 8.7 million gallons of FCOJ were exported, mostly to Canada. There were also 3.4 million gallons of FCGJ exported, down slightly from 3.7 million gallons the previous season.

### PRICES

All on-tree prices represent the average price received by growers for their fruit by types. Prices are based on records of commercial fresh fruit sales and processed fruit returns. The term "on-tree" relates to fruit value before it is picked and hauled from the grove. Each season, beginning with the first month that three percent of a fruit type is harvested, monthly estimates are computed. Reports from fresh fruit sales organizations and from packers provide data for an average f.o.b. price. Processors report an average spot and cash price for fruit delivered to their plants. From these values, an estimated charge for picking, hauling, and packing is deducted to arrive at an on-tree price. The anticipated box utilization for the month is used to combine the fresh and processing price to obtain an average price for all methods of sales. At the end of the season, monthly price averages are computed and weighted by boxes utilized, to provide the preliminary season average price.

A year later, after most processed products are sold, cooperatives and firms with participation plans report prices of fruit they handled. These prices, combined with the spot and cash prices collected earlier, are weighted together by varieties to determine the final processing price received by growers. From this price, charges for picking, hauling, and packing, as estimated by University of Florida economists, are deducted to arrive at the final on-tree price received by growers.

### COUNTY PRODUCTION

Estimates of citrus production by counties were prepared using objective survey data obtained from the citrus crop estimates program. Production for Florida has been distributed to counties based on the biennial citrus tree census, limb count survey data adjusted for droppage to end of season, and size data at maturity.

Tree numbers by county which are used in the estimates were obtained from the latest tree census. Productivity per tree are obtained from several objective fruit surveys including limb count, size, and droppage samples. Because of the statistical sampling design, counties with higher production in general have a greater number of fruit samples and, therefore, estimates for these counties can be considered more reliable. Thus, for the same reason, estimates for the production areas are more reliable than for individual counties.

#### History of Florida's Citrus Industry

The citrus tree is a native of the Orient. From there it was carried ever westward by man, to India, to the Mediterranean and on across the Atlantic. Citrus was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518. The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Pedro Medendez, dated April 2, 1579, it appears that citrus fruits were grown in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the State. One of the oldest, cultivated groves planted in Florida (Hume, 1926 p.95) is thought to have been the Don Phillippe grove in Pinellas County, planted sometime between 1809 and 1820.

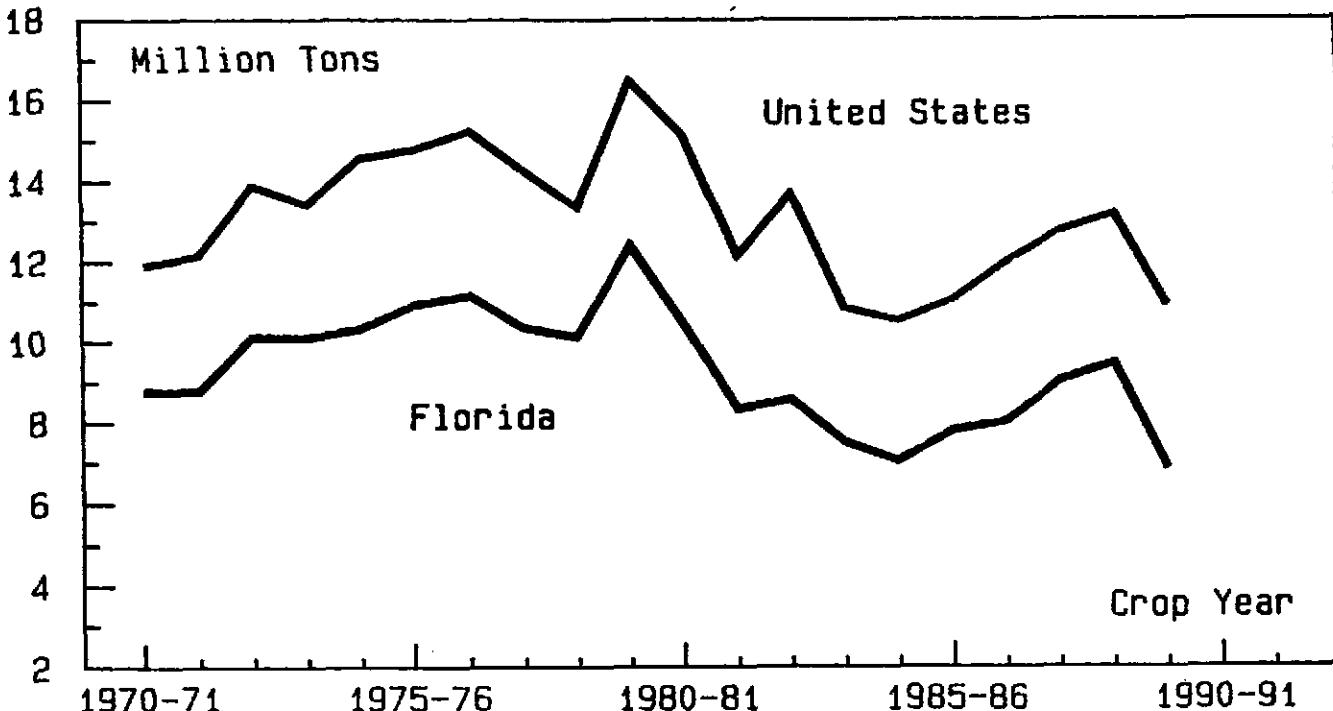

Citrus production in Florida had reached an all time high of more than 5 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It was not until 1909-10 that this level was reached again. In 1989-90, Florida had 62.7 percent of the Nation's production.

Footnote 3/ for page 32, 2/ for page 33, and 1/ for page 34. Final Mexican shipments to the U.S. are reported by FAS as a combined total for oranges and tangerines. The totals shown on pages 32 through 34 have been broken down proportionally into oranges and tangerines from Plant Quarantine data reported at the time of the crossing. Plant Quarantine releases give separate totals for these two types of citrus. Mexican shipments through the U.S. to Canada are not included.

1/ Forecast. 2/ One metric ton is equivalent to 2,204.6 pounds. 3/ Includes tangerines and Temples in some countries. 4/ Includes some fruit produced in Swaziland, Botswana, and Mozambique which is marketed through the South African Citrus Board. 5/ Mainly satsumas but also including mandarin hybrids. 6/ State of Sao Paulo only, which apparently accounts for over one-half of Brazil's production. About 120,000 tons of tangerines which are processed are included in the orange table. 7/ Includes tangelos, which account for about half of the total production. 8/ Clementines only.
